Kansas City, KS 66115-1175

Dear Leon,

As you know Manna Pro packages animal food products in many different size bags that require a flexible robotic palletizing solution. Several new manufacturing technologies were employed as part of the development process. Due to the competitive nature of this market environment, Manna Pro had a need to bring this system to market at best price and as quickly as possible.

Rapid Development Services, Inc. was contracted to provide a robotic manufacturing system for the product. The manufacturing requirements were complex and involved palletizing of difficult to stack bags for over 40 different products with content ranging from small particles to large charcoal size products or molasses like liquids. Other achievements were met also such as the high rate and tool less changeovers. RDS and their understanding of the processes and presentation of potential solutions was a primary factor in awarding them the contract for this system.

Rapid Development Services' technical expertise in handling products with multi-axis robotics, integration methods, design collaboration, and customer support have allowed MannaPro to have flexible and user friendly solution that end up being reliable & easy to use. Their participation has resulted in our ability to successfully implement a robotic solution to reduce our cost and improve our delivery in a competitive market.

Sincerely,

Richard Sweeney
